## 1. Product introduction

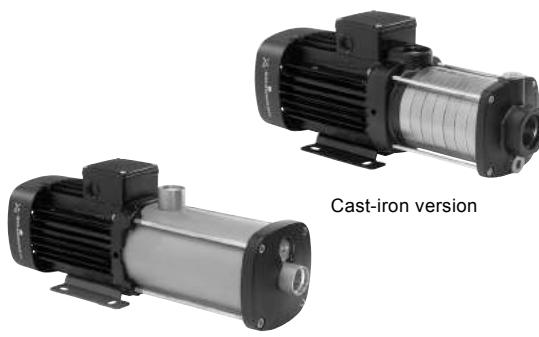

The Grundfos CM and CME pumps are horizontal, multistage, end-suction centrifugal pumps. The pumps are of the close-coupled type and available as either self-priming or non-self-priming pumps. CM pumps are fitted with mains-operated motors whereas the motor for CME pumps has an integrated frequency converter. Both CM and CME pumps have mechanical shaft seals.

The CM and CME pumps are available in these three material versions:

- cast iron (EN-GJL-200)\*
- stainless steel (EN 1.4301/AISI 304)
- stainless steel (EN 1.4401/AISI 316).

\* The pump shaft, impeller, chamber and filling plugs are made of stainless steel (EN 1.4301/AISI 304).

### CM

Cast-iron version

Stainless-steel version

**Fig. 1** Grundfos CM pumps

TM05 1128 2211 - TM05 1129 2211

The CM pumps are unique products that have been developed in order to fulfil a wide variety of customer demands. The development of the pumps has resulted in no less than five patent applications.

The CM pumps are available in various sizes and numbers of stages to provide the flow and pressure required.

The CM pumps consist of two main components: the motor and the pump unit. The motor is a Grundfos motor designed to EN standards. The pump unit incorporates optimised hydraulics and offers various types of connections.

The pumps offer many advantages, some of which are listed below and described in detail in *Features and benefits* on page 10:

- compact design
- worldwide usage
- high reliability
- service friendly
- wide performance range
- low noise
- customised solutions.

## CME

TM06 6197 0816

**Fig. 2** Grundfos CME pump

The CME pumps are built on the basis of CM pumps. CME pumps belong to the so-called E-pump family. The difference between the CM and the CME pump ranges is the motor.

The CME pump motor is a Grundfos MGE motor designed to EN standards. The motor incorporates a frequency converter.

Frequency control enables continuously variable control of the motor speed, which makes it possible to set the pump to operation at any duty point. The aim of continuously variable control of the motor speed is to adjust the performance to a given requirement.

You can connect a pressure sensor to the built-in frequency converter on CME pumps. For further information, see section *Sensors for CME* on page 137.

The pump materials are identical to those of the CM pump range.

### Highest energy efficiency rating worldwide

CME pumps are fitted with the new-generation MGE motors which are permanent-magnet motors incorporating a high-efficiency frequency converter. This ensures an even higher efficiency of the pump. The motor is energy efficiency class IE5 according to IEC60034-30-2. In combination with the integrated frequency converter, the combined power drive system is efficiency class IES2 according to IEC50598-2.

### Selecting a CME pump

Select a CME pump if the following features are required:

- controlled operation, i.e. consumption fluctuates
- constant pressure
- communication with the pump.

Adaptation of performance through frequency-controlled speed offers obvious benefits such as:

- energy savings
- increased comfort
- control and monitoring of the application and pump performance.

For further information about CME pumps, see *CME pumps* on page 29.

### 3. Applications

The CM and CME pumps are designed to cover a wide variety of applications, ranging from small domestic installations to large industrial systems. The pumps are therefore suitable for a wide diversity of pumping systems where the performance and material of the pump must meet specific demands.

Some of the most typical applications are mentioned below:

- washing and cleaning
- water treatment
- temperature control
- pressure boosting.

#### Washing and cleaning

**Fig. 3** Washing and cleaning

CM and CME pumps can be used in washing and cleaning applications, which usually involve pumping of water containing soap or other cleaning agents.

#### Reference applications

Typical washing and cleaning applications:

- degreasing and washing of production equipment in industrial environments such as the food and beverage industry
- washing machines
- vehicle-washing tunnels
- mobile-washing units
- units for CIP (Cleaning In Place).

#### Water treatment

**Fig. 4** Water treatment

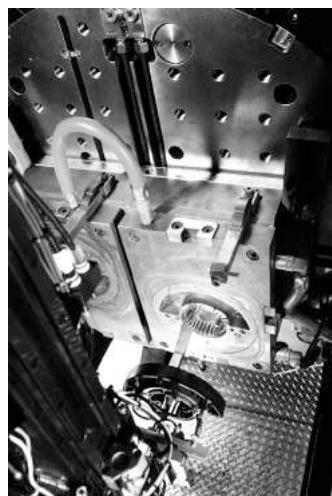

In water treatment plants, the water undergoes a process which makes it more suited for its end use. In this process, the CM and CME pumps can be utilised either as feed pumps or as booster pumps.

#### Reference applications

Typical water treatment applications:

- nano-, micro- and ultra-filtration systems
- softening, ionising, demineralising systems
- desalination systems
- distillation systems
- separators
- swimming baths.

#### Temperature control

**Fig. 5** Temperature control

Temperature control involves applications where the CM and CME pumps circulate a liquid in a closed loop consisting of a heating or cooling element for optimising a process by means of temperature. Temperature control is also chilling of equipment or food and beverage in the food production industry.

## Reference applications

The CM and CME pumps can for example be used in temperature control systems such as:

- electronic data processing
- laser equipment
- medical equipment
- industrial refrigeration
- heating and cooling in industrial processes
- moisturising and humidifying.

To ensure safe and reliable operation in applications involving temperature control, we offer CM and CME pumps designed to meet your needs!

We provide solutions for applications involving pumping of these liquids:

- liquids at temperatures down to -20 °C
- high-temperature liquids
- high-viscous liquids, etc.

### Pumping of liquids at temperatures down to -20 °C

When pumping liquids at temperatures down to -20 °C, it is crucial that the pump parts are made of the right materials and have the right dimensions. At such low temperatures, the selection of wrong materials and dimensions may cause deformation because of thermal expansion, and eventually stoppage of operation.

**Note:** CM and CME pumps for pumping liquids at temperatures below -20 °C are available on request. Please contact Grundfos.

### Pumping of high-temperature liquids

The pumping of hot liquids such as water-based liquids up to 120 °C demands much of the pump parts, such as shaft seals and rubber parts.

### Pumping of high-viscous liquids

In applications where high-viscous liquids are pumped, the motor of the pump can be overloaded, and the pump performance will be reduced.

The viscosity of a pumped liquid depends strongly on the pumped liquid and its temperature.

To meet the above-mentioned requirements, we offer CM and CME pumps with oversize motors.

## Pressure boosting

Gr0526

**Fig. 6** Pressure boosting

In pressure-boosting applications, the pumped liquid must be delivered at a desired pressure on demand. The main priorities in pressure-boosting applications are to ensure maximum reliability and user comfort. Therefore, the CM and CME pumps are also ideal for such applications.

### Reference applications

Typical pressure-boosting applications:

- pressure boosting and transfer of drinking water
- process-water systems.

### Other applications

Besides the applications mentioned above, the CM and CME pumps can be used in many other applications.

Examples:

- distilling systems
- dosing/mixing
- evaporation
- comprised machinery
- chemical industry
- pharmaceutical industry.

## 4. Features and benefits

**Fig. 7** CM and CME pumps

TM04 3509 4508 - TM06 6197 0816

CM and CME pumps present the following features and benefits:

### Compact design

Pump and motor are integrated in a compact and user-friendly design. The pump is fitted to a low-profile base plate, making it ideal for installation in systems where compactness is important.

### Modular construction/customised solutions

The modular construction of the CM and CME pumps makes it easy to create many different variants based on standard factory parts. This means that it is possible to create pump variants that are customised for the application in question.

### Energy-optimised pumps

CM and CME pumps are energy-optimised and comply with the EuP Directive (Commission Regulation (EC) No 547/2012) in which most pumps are classified/graduated in a new energy efficiency index (MEI). See also page 18.

### Worldwide usage

- With different voltage and frequency combinations, the CM and CME product ranges cover markets worldwide.
- The CM and CME product ranges have been approved and are marked for worldwide usage. See *Approvals and markings* on page 32.

### High reliability

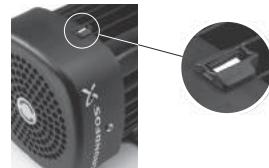

New state-of-the-art shaft seal design and materials offering these benefits:

- high wear resistance and long operating life
- improved sticking and dry-running capabilities.

The pumps are less sensitive to impurities in the pumped liquid than similar pumps of the canned-rotor type.

### Easy installation and commissioning

- A Quick Guide supplied with the CM pump enables easy installation and commissioning. Detailed multilingual installation and operating instructions are available for each pump.
- An installation indicator fitted to three-phase CM pumps makes it easy to see if the electrical connection of the motor is correct. Based on the motor cooling air, it indicates the direction of rotation of the motor.

**Fig. 8** Installation indicator

TM05 0870 1811

### Service-friendly

- Service was in mind during the development.
- No special service tools required.
- Spare parts in stock for quick delivery.
- Service parts available as kits, single parts or bulks.
- Service instructions and video make it simple to disassemble and assemble the pump.
- Service kit instructions available where estimated necessary.

### Additional features and benefits for self-priming pumps

The CM self-priming pump can create a suction lift of up to 8 metres in less than 5 minutes when installed and commissioned correctly.

- The pump is available in stainless steel 1.4301 with EPDM or Viton O-rings.
- The pump is available for single-phase operation as standard and for three-phase operation on request.

### **Wide performance range**

Can be used in a wide range of applications:

- washing and cleaning
- water treatment
- temperature control
- pressure boosting
- chemical industry
- pharmaceutical industry
- etc.

Product range in the Grundfos Product Center (<http://product-selection.grundfos.com/>).

### **Low noise level**

The CM and CME pumps offer very silent operation.

### **High-performance hydraulics**

Pump efficiency is maximised by the optimised hydraulics and carefully crafted production technology.

### **Electrocoated cast-iron parts**

- optimised corrosion resistance
- better efficiency because of smooth surfaces.

### **Customised solutions**

It is possible to create many different variants of the CM and CME pumps. For further information, see *Customisation* on page 124.

- motor adaptation
- pump body modifications.

### **Grundfos motor**

Grundfos motors are remarkably silent and highly efficient.

Grundfos motors are available with integrated frequency converter designed for speed-controlled operation.

### **Data and literature about the CM and CME pumps**

All literature and technical data related to CM and CME pumps are available on line in the Grundfos Product Center (<http://product-selection.grundfos.com/>).

1) On request.

2) Neither suitable for 60 Hz mains-operated pumps, nor for CME pumps running at 100 % speed.

3) Not suitable for pumping liquids at temperatures above 90 °C.

4) Pumps with supply voltages B and E are supplied for wire connection without terminal board inside the terminal box (flying wires). Pumps with supply voltages B1 and E1 are supplied with terminal board inside the terminal box.

5) Only available with IE2-compliant motors and cannot be exported to the USA.

1) On request.

2) Neither suitable for 60 Hz mains-operated pumps, nor for CME pumps running at 100 % speed.

3) Not suitable for pumping liquids at temperatures above 90 °C.

4) Pumps with supply voltages B and E are supplied for wire connection without terminal board inside the terminal box (flying wires). Pumps with supply voltages B1 and E1 are supplied with terminal board inside the terminal box.

5) Only available with IE2-compliant motors and cannot be exported to the USA.

### EuP ready

The CM, CME pumps are energy-optimised and comply with the EuP Directive (Commission Regulation (EC) No 547/2012) which has been effective since 1 January 2013. As from this date, all pumps will be classified/graduated in a new energy efficiency index (MEI).

### Minimum efficiency index

Minimum efficiency index (MEI) means the dimensionless scale unit for hydraulic pump efficiency at best efficiency point (BEP), part load (PL) and overload (OL). The Commission Regulation (EU) sets efficiency requirements to  $MEI \geq 0.40$  as from 1 January 2015. An indicative benchmark for best-performing water pump available on the market as from 1 January 2013 is determined in the Regulation.

- The benchmark for most efficient water pumps is  $MEI \geq 0.70$ .
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.

- The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable-speed drive that matches the pump duty to the system.
- Information on benchmark efficiency is available at <http://europump.eu/efficiencycharts>.

Pump type	MEI	Efficiency at best efficiency point [%]
CM, CME 1 A	0.70	37.1
CM, CME 1 I/G	0.68	36.4
CM, CME 3 A	0.70	50.6
CM, CME 3 I/G	0.70	49.3
CM, CME 5 A	0.70	53.3
CM, CME 5 I/G	0.70	52.1
CM, CME 10 A	0.70	62.2
CM, CME 10 I/G	0.52	57.9
CM, CME 15 A	0.70	67.5
CM, CME 15 I/G	0.59	63.1
CM, CME 25 A	0.70	68.3
CM, CME 25 I/G	0.41	63.8

## 8. Operating conditions

### Ambient temperature

The maximum ambient temperature depends on the liquid temperature. The table below shows the temperature limits of CM and CME pumps.

**Note:** The maximum permissible liquid temperature for CM-A and CME-A is 90 °C.

Maximum ambient temperature [°C]	Minimum ambient temperature [°C]	Liquid temperature [°C]	Pump type		
			CM	CM self-priming	CME <sup>1)</sup>
55 °C		60 °C	•	•	-
55 °C		90 °C	•	-	-
50 °C	-20 °C	100 °C <sup>1)</sup>	•	-	•
45 °C		110 °C <sup>1)</sup>	•	-	•
40 °C		120 °C <sup>1)</sup>	•	-	•

<sup>1)</sup> CME (supply voltages S, T, U)

### CM mains-operated motors

If the ambient temperature for CM pumps exceeds 55 °C, the motor must not be fully loaded due to the risk of overheating.

In such cases, it may be necessary to derate the motor output or use an oversize motor with higher rated output. The CM pumps can be derated in relation to ambient temperature without consequence. Contact Grundfos for further information.

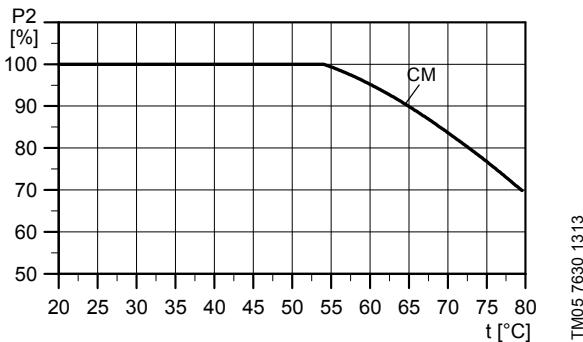

Fig. 9 Derating of CM pump, in relation to ambient temperature

TM05 7630 1313

### CME speed-controlled motors

The electronics incorporated in the CME pumps is limiting the maximum ambient temperature. This means that the maximum ambient temperature must not be exceeded. If the pump is operated at temperatures exceeding the maximum ambient temperature, the motor life will be reduced.

#### Maximum ambient temperature

CME, supply voltages S, T, U:

50 °C.

CME 0.37 to 7.5 kW, supply voltages Q, R:

40 °C.

**Note:** You can operate the new-generation CME pumps at 60 °C as well. In such case, contact Grundfos for further information.

### Storage and transport temperature

-30 to +60 °C.

### Installation altitude

Installation altitude is the height above sea level of the installation site. Motors installed at maximum altitude can be loaded 100 %. Motors installed above maximum altitude must not be fully loaded due to the low density and consequently low cooling effect of the air.

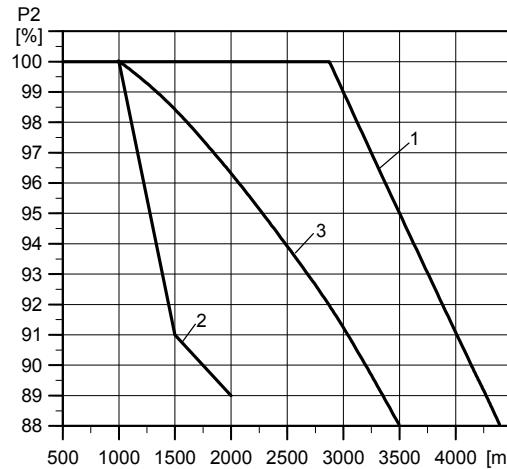

Fig. 10 Relationship between motor output (P<sub>2</sub>) and altitude

TM05 7631 1313

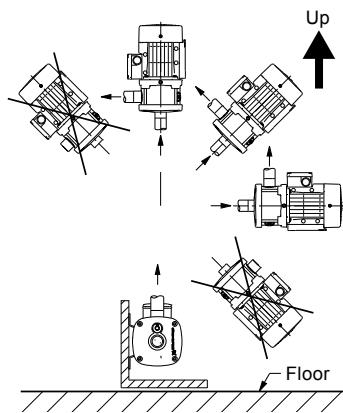

Pos.	Pump type	Voltage type
1	CM	All
2	CME	S, T, U
3	CME	Q, R

## Installation of pump

The pump must be installed on a plane surface and fixed so that it cannot be displaced during startup and operation.

### Installation of CM and CME pumps

The pump must be installed so that air locks are avoided in the pump housing and pipework. Figure 11 shows the permissible pump positions.

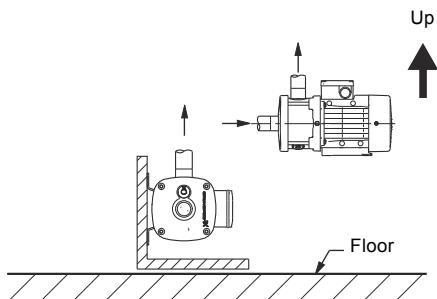

TM03 8773 2810

Fig. 11 Positions of CM and CME pumps

### Installation of CM self-priming pumps

Install the pump so that the inlet is horizontal. Figure 12 shows the permissible pump positions.

TM05 8905 2514

Fig. 12 Positions of CM self-priming pumps

Install the pump with easy access for inspection, maintenance and service.

Install the pump in a well-ventilated location.

## Maximum operating pressure and permissible liquid temperature

The maximum operating pressure and the permissible liquid temperature depend on the pump material, the type of shaft seal and the pumped liquid.

### CM, CME pumps

Material variant	Shaft seal	Permissible liquid temperature <sup>1)</sup> [°C]	Maximum operating pressure [bar]
Cast iron (EN-GJL-200)	AVBx	-20 - 40 41-90	10 6
	AQQx/ AQBx	-20 - 90	10
	RUUx	-20 - 60	6
Stainless steel (EN 1.4301/AISI 304)	AVBx	-20 - 40 41-90	10 6
	AQQx/ AQBx	-20 <sup>2)</sup> - 90 91-120	16 10
	RUUx	-20 - 60	6
Stainless steel (EN 1.4401/AISI 316)	AVBx	-20 - 40 41-90	10 6
	AQQx/ AQBx	-20 <sup>2)</sup> - 90 91-120	16 10
	RUUx	-20 - +60	6

### CM self-priming pumps

Material variant	Shaft seal	Permissible liquid temperature <sup>1)</sup> [°C]	Max. operating pressure [bar]
Stainless steel (EN 1.4301/AISI 304)	AVBx	0-40 41-60	10 6
	AQQx	0-60	16

<sup>1)</sup> At liquid temperatures below 0 °C (32 °F), higher motor outputs may be needed due to increased viscosity, for instance if glycol has been added to the water.

<sup>2)</sup> CM-I, -G and CME-I, -G pumps for liquid temperatures below -20 °C are available on request. Please contact Grundfos.

### Maximum liquid temperature change gradient

Cast-iron pumps (CM-A, CME-A) should not be used in applications where rapid temperature changes of more than 45 °C may occur. If exposed to such rapid temperature changes, a cast-iron pump may leak.

Under such operating conditions, we recommend to use stainless-steel pumps (CM-I, -G and CME-I, -G).

### Liquid temperature range

O-ring material/liquid	Permissible liquid temperature [°C]
EPDM	-20 - 120
FFKM	0-120
FKM/liquids containing water	-20 - 90
FKM/oil without water	-20 - 120

## Frequency of starts and stops

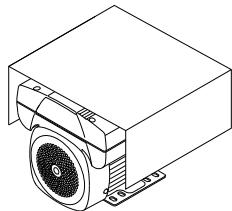

Maximum 100 per hour.

## Operation in condensing environments

If the liquid temperature becomes lower than the ambient temperature, condensation may form in the motor during inactivity. In such cases, a motor suited for condensing environments must be used, e.g. an IPX5 motor (available from Grundfos).

Alternatively, you can open the bottom drain hole in the motor flange by removing the plug. The enclosure class of the motor is then reduced to IPX5. Removing the plug helps prevent condensation in the motor as it will make the motor self-venting and allow water and humid air to escape.

When installing CM and CME pumps outdoors, provide them with a suitable cover to protect them from build-up of condensed water. See fig. 13.

TM04 5799 4009

**Fig. 13** CME pump with protective cover

Motors in outdoor installations radiate heat to and absorb heat from their surroundings. By day, a stopped motor will absorb more heat than it radiates; by night, especially clear nights, radiation from a stopped motor may be so high that the surface temperature drops a few degrees below the air temperature. This may cause the formation of condensation. Condensation on the inner surfaces may result in moisture on the electronic components, including the printed-circuit boards, which means a risk of failure or even destruction of the motor and electronics.

Furthermore, the cover protects the motor against direct sunlight.

## Environmental rating

Three-phase CME motors hold a UL NEMA 3R environmental rating.

Single-phase CME motors have not been tested against the UL NEMA environmental rating.

All motors are IP55.

## Operating range of the shaft seal

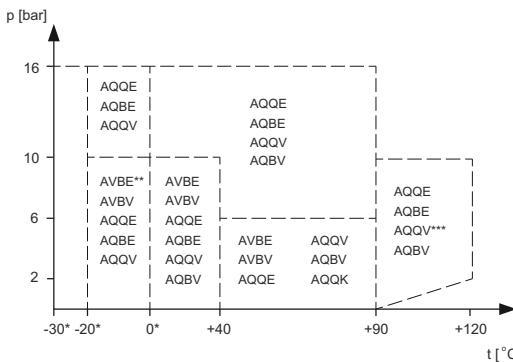

The operating range of the shaft seal depends on operating pressure, type of shaft seal and liquid temperature.

The curve in fig. 14 shows which shaft seals are suitable at a given temperature and a given pressure.

The curve applies to clean water.

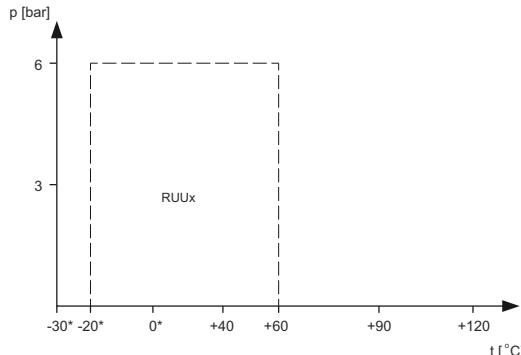

For other pumped liquids, concentrations and temperatures, please visit the Grundfos Product Center liquids section >

<http://product-selection.grundfos.com/liquids.html>

TM05 7521 1113

**Fig. 14** Curve for the selection of AQQx, AQBx and AVBx shaft seals

TM06 2049 3614

**Fig. 15** Curve for RUUx shaft seal

\* Antifreeze should be added at liquid temperatures below 0 °C.

\*\* CM and CME pumps for liquid temperatures below -20 °C are available on request. Please contact Grundfos.

\*\*\* AQQV/AQBV above 90 °C only in media not containing water.

### Shaft seal run-in

The seal faces are lubricated by the pumped liquid, meaning that there may be a certain amount of leakage from the shaft seal.

When the pump is started up for the first time, or when a new shaft seal is installed, a certain run-in period is required before the leakage is reduced to an acceptable level. The time required for this depends on the operating conditions, i.e. every time the operating conditions change, a new run-in period will be started. Under normal conditions, the leaking liquid will evaporate. As a result, no leakage will be detected. However, liquids such as kerosene will not evaporate. The leakage may therefore be seen as a shaft seal failure.

### Viscosity

The pumping of liquids with densities or kinematic viscosities higher than those of water will cause a considerable pressure drop, a drop in the hydraulic performance and a rise in the power consumption.

For instance at liquid temperatures below 0 °C (32 °F), higher motor outputs may be needed due to increased viscosity if glycol has been added to the water.

In such situations, the pump should be fitted with a larger motor. If in doubt, contact Grundfos or visit the Grundfos Product Center >

<http://product-selection.grundfos.com/>.

### Sound pressure level

The sound pressure values in the table below apply for CM pumps. If the motor output (P2) for a given pump is not found in the table, use the nearest rounded-up value. The values for sound pressure include a tolerance of 3 dB(A) according to EN ISO 4871.

$P_2$ [kW]	50 Hz		60 Hz	
	$L_{pA}$ [dB(A)]	$L_{pA}$ [dB(A)]	$L_{pA}$ [dB(A)]	$L_{pA}$ [dB(A)]
0.37	50	54	54	58
0.55	49	53	53	57
0.75	49	54	54	58
1.1	54	49	54	58
1.5	54	59	59	63
2.2	56	60	60	64
3.0	55	60	60	64
4.0	59	64	64	68
5.5	59	64	64	68
7.5	60	65	65	70

The audible noise from CM pumps is primarily noise from the motor fan. The selection of CME pumps will reduce the noise at partial load, as the motor, and consequently, the motor fan runs at a lower speed. Possible flow noise from control valves is also reduced at partial load in the case of the CME pump.

### Minimum inlet pressure, NPSH

Grundfos recommends that you calculate the inlet pressure "H" in these situations:

- The liquid temperature is high.
- The flow is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- Inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the suction side of the pump. The maximum suction lift "H" in metres head can be calculated as follows:

$$H = p_b \times 10.2 - NPSH - H_f - H_v - H_s$$

$p_b$	Barometric pressure in bar. (Barometric pressure can be set to 1 bar). In closed systems, $p_b$ indicates the system pressure in bar.
NPSH	Net Positive Suction Head in metres head. (To be read from the NPSH curve at the highest flow the pump will be delivering).
$H_f$	Friction loss in suction pipe in metres head. (At the highest flow the pump will be delivering).
$H_v$	Vapour pressure in metres head. (To be read from the vapour pressure scale, " $H_v$ " depends on the liquid temperature " $T_m$ ").
$H_s$	Safety margin = minimum 0.5 metres head.

If the "H" calculated is positive, the pump can operate at a suction lift of maximum "H" metres head.

If the "H" calculated is negative, an inlet pressure of minimum "H" metres head is required.

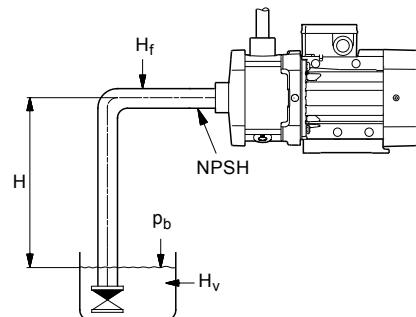

Fig. 16 Minimum inlet pressure (NPSH)

**Note:** To avoid cavitation, never select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow.

**Note:** NPSH must also be observed and calculated for CM self-priming pumps.

## 9. Construction

### Pump

The Grundfos CM and CME pumps are horizontal, multistage, end-suction centrifugal pumps. The pumps are of the close-coupled type and are available as either self-priming or non-self-priming pumps. The pumps have an axial inlet port and a radial discharge port and are mounted on a base plate.

All movable parts are made of stainless steel.

Self priming pumps are fitted with an internal water trap and an internal valve, both of which are mainly made of a composite material.

You find the sectional drawings on pages 25 to 27.

The pumps are available with mains-operated motors (CM pumps) and electronically speed-controlled motors (CME pumps).

All pumps incorporate a maintenance-free mechanical O-ring shaft seal with fixed driver.

TM05 1130 2221

**Fig. 17** CM and CME pump hydraulics

### Motor

CM and CME pumps are fitted with totally enclosed, fan-cooled, 2-pole motors with principal dimensions to EN 50347. The motors have been developed especially for CM and CME pumps.

Electrical tolerances comply with EN 60034.

Single-phase CME pumps are available from 0.37 to 1.5 kW.

Three-phase CME pumps are available from 0.37 to 7.5 kW.

### Soft starter

Soft starters are only to be used for three-phase motors.

### Efficiency

Motors for CM and CME pumps comply with different energy-efficiency requirements throughout the world, for example the European Ecodesign.

For China, motors with CCC and CEL marking are available.

Generally, this means that all three-phase motors of 0.75 kW and up are IE3-compliant as standard.

### MGE motors

The motor is energy efficiency class IE5 according to IEC60034-30-2. In combination with the integrated frequency converter, the combined power drive system is efficiency class IES2 according to IEC50598-2.

\* IP55 is not recommended for operation in condensing environments.

For operation in such environments, see *Operation in condensing environments* on page 21.

## Motor protection

### Mains-operated motors (CM)

Single-phase motors, 1 x 115/230 V, 60 Hz, do not incorporate motor protection and must be connected to a motor-protective circuit breaker which can be manually reset. Set the motor-protective circuit breaker according to the rated current of the motor ( $I_{1/1}$ ). See the nameplate.

Other single-phase motors have built-in current- and temperature-dependent motor protection in accordance with IEC 60034-11 and require no further motor protection. The motor protection reacts to both slow- and quick-rising temperatures. The motor protection is automatically reset.

Three-phase motors up to 3 kW must be connected to a motor-protective circuit breaker which can be manually reset. Set the motor-protective circuit breaker according to the rated current of the motor ( $I_{1/1}$ ). See the nameplate. Motors with power ratings of 3 kW and up have built-in thermistors (PTC)\*. The thermistors are designed according to DIN 44082. The motor protection reacts to both slow- and quick-rising temperatures.

\* Applies only to supply voltages F, G and O. Motors for other supply voltages must be connected to a motor-protective circuit breaker as described for three-phase motors up to 3 kW.

### Electronically speed-controlled motors (CME)

CME pumps require no external motor protection. The MGE motor incorporates thermal protection against steady overload and stalled condition (IEC 34-11).

## Frequency converter operation

All three-phase motors can be connected to a frequency converter. Depending on the frequency converter type, this may cause increased acoustic noise from the motor. Furthermore, it may cause the motor to be exposed to detrimental voltage peaks. Single-phase motors must not be connected to a frequency converter.

As standard MG 71- and MG 80-based motors have no phase insulation and must therefore be protected against voltage peaks higher than 650 V (peak value) between the supply terminals.

**Note:** MG 71- and MG 80-based motors with phase insulation are available on request.

The above disturbances, i.e. both increased acoustic noise and detrimental voltage peaks, can be eliminated by fitting an LC filter between the frequency converter and the motor.

For further information, please contact the frequency converter supplier or Grundfos.

## Shaft seal

The shaft seal for the CM and CME pumps is of the O-ring type, which makes it very flexible when different types of O-rings and seal-face materials are needed. The shaft seal has a fixed seal driver which ensures a reliable rotation of all parts - even under the most extreme operating conditions.

Due to the special design of the shaft seal and the interfaces to the rest of the pump construction, the dry-running capabilities are improved significantly compared to most other similar shaft seals and pump types. Furthermore, improvements have been made to reduce the risk and effect of sticking. The shaft seal types available can be found in *Selection of CME pumps* on page 37 where the key parameters of selecting a shaft seal are also described.

TM05 1131 2211

Fig. 18 Exploded view of shaft seal

**Note:** The available shaft seals for CM and CME pumps are very robust and durable, but dry running must always be avoided.

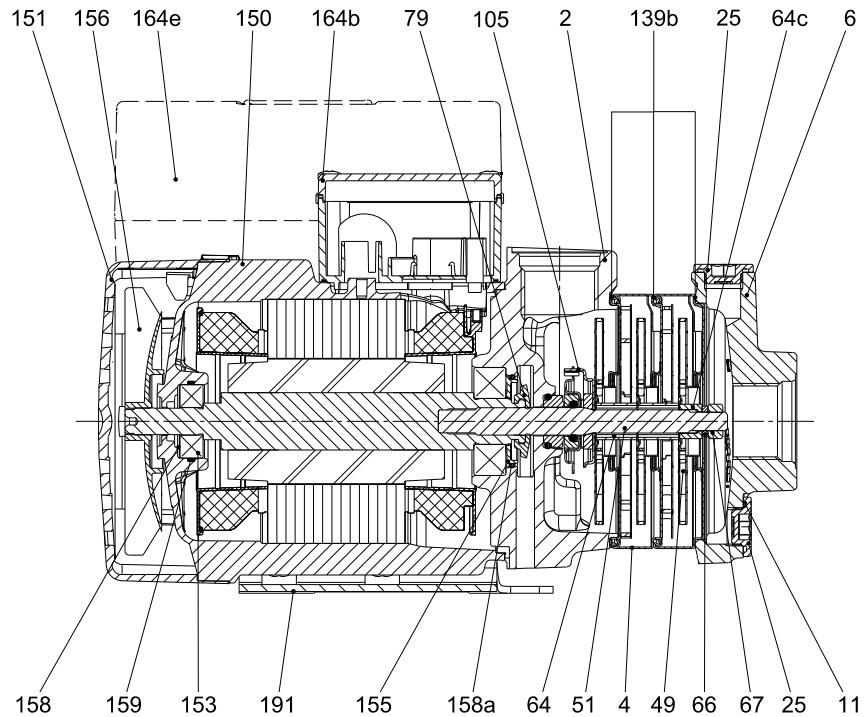

Details regarding operating conditions for the shaft seal can be found in *Operating range of the shaft seal* on page 21.

Further information about the shaft seal can be found in the separate book covering shaft seals which can be ordered from Grundfos.

1) On request.

2) As standard, the pumps listed below are fitted with sleeves made of stainless steel 1.4401:

CM(E) 1-9 up to and including CM(E) 1-14

CM(E) 3-9 up to and including CM(E) 3-14

CM(E) 5-9 up to and including CM(E) 5-13

CM(E) 10-6 up to and including CM(E) 10-8.

3) Only in CM(E)-I/G pumps.

4) Only in CM(E)-A pumps.

5) STX2000 ~ CrNiMO 22 19 4.

## 10. CME pumps

### Communication with CME pumps

Communication with CME pumps is possible via

- a central building management system
- Grundfos GO Remote
- a control panel.

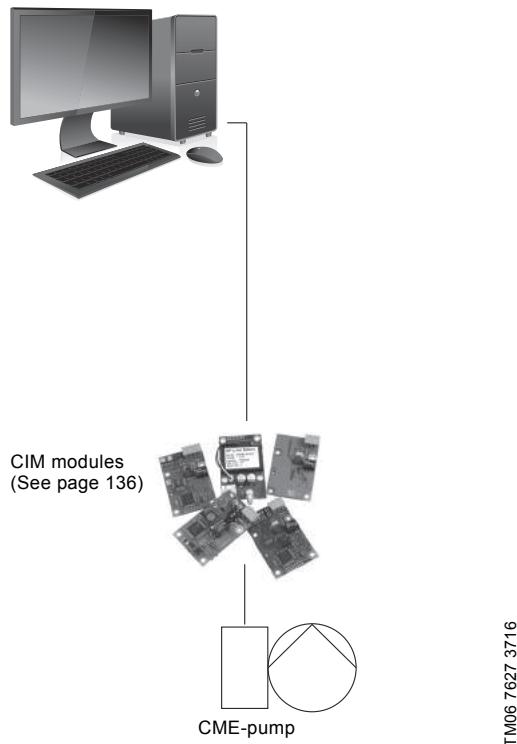

### Central building management system

The operator can communicate with a CME pump at a distance. Communication can take place via a central building management system allowing the operator to monitor and change control modes and setpoint settings.

### Communication interface

CME pumps can be fitted with a communication interface module (CIM). This means that no external communication interface is required.

The modules are available as accessories, see page 136.

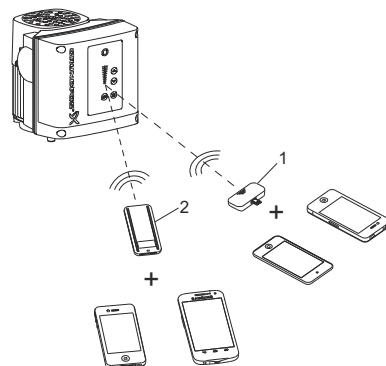

**Fig. 22** Structure of a central management system

### Grundfos GO

The pump is designed for wireless radio or infrared communication with Grundfos GO.

Grundfos GO enables setting of functions and gives access to status overviews, technical product information and actual operating parameters.

Grundfos GO offers the following mobile interfaces (MI).

TM06 6256 0916

**Fig. 23** Grundfos GO communicating with the pump via radio or infrared connection (IR)

#### Pos. Description

1	Grundfos MI 204: Add-on module enabling radio or infrared communication. You can use MI 204 in conjunction with an Apple iPhone or iPod with Lightning connector, e.g. fifth generation or later iPhone or iPod. MI 204 is also available together with an Apple iPod touch and a cover.
2	Grundfos MI 301: Separate module enabling radio or infrared communication. You can use the module in conjunction with an Android or iOS-based smart device with Bluetooth connection.

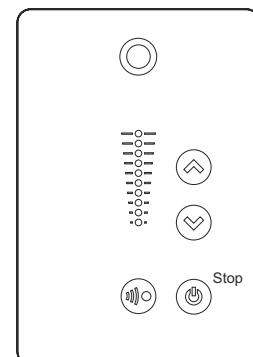

Grundfos GO is available as an accessory. See page 136.

### Control panel

The operator can change the setpoint settings manually on the control panel of the CME pump terminal box.

The design and functionality of the control panels vary, depending on the MGE motor fitted to the CME pump.

The control panel of the new-generation CME pumps enables radio communication. The Grundfos Eye at the top of the control panel is a pump status indicator light providing information about the pump operating status. Less or more advanced control panels are available on request.

TM05 5362 3612

**Fig. 24** Standard control panels of CME pumps

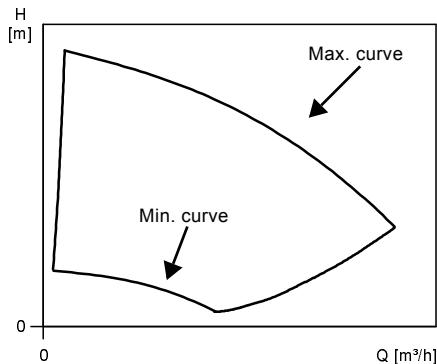

## Speed control of CME pumps

### Affinity equations

Normally, CME pumps are used in applications characterised by a variable flow. Consequently, you cannot select a pump that is constantly operating at its optimum efficiency.

In order to achieve optimum operating economy, the duty point should be close to the optimum efficiency (eta) for most operating hours.

Between the minimum and maximum performance curves, CME pumps have an infinite number of performance curves, each representing a specific speed. You may therefore not be able to select a duty point close to the maximum curve.

**Fig. 25** Minimum and maximum performance curves

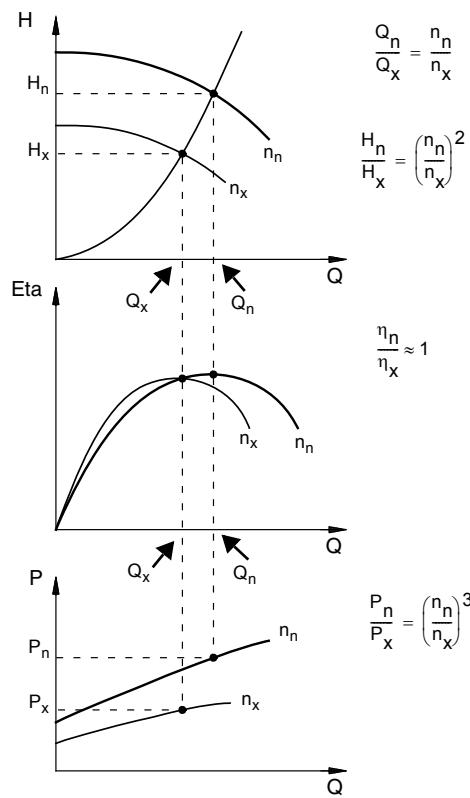

TM01 4916 4803

In situations where you cannot select a duty point close to the maximum curve, use the affinity equations below. The head (H), the flow rate (Q) and the input power (P) are the appropriate variables for calculating the motor speed ( $n$ ).

**Note:** The approximated formulas apply on condition that the system characteristic remains unchanged for  $n_n$  and  $n_x$  and that it is based on the formula  $H = k \times Q^2$  where  $k$  is a constant.

The power equation implies that the pump efficiency is unchanged at the two speeds. In practice, this is not quite correct.

Finally, it is worth noting that the efficiency of the frequency converter and the motor must be taken into account if a precise calculation of the power saving resulting from a reduction of the pump speed is wanted.

**Fig. 26** Affinity equations

### Legend

- $H_n$ : Rated head [m]
- $H_x$ : Current head [m]
- $Q_n$ : Rated flow rate [ $\text{m}^3/\text{h}$ ]
- $Q_x$ : Current flow rate [ $\text{m}^3/\text{h}$ ]
- $n_n$ : Rated motor speed [ $\text{min}^{-1}$ ]
- $n_x$ : Current motor speed [ $\text{min}^{-1}$ ]
- $\eta_n$ : Rated efficiency [%]
- $\eta_x$ : Current efficiency [%].

TM00 8720 3496

## 11. Grundfos CUE

### CM pumps connected to Grundfos CUE, external frequency converters

GIA4404

**Fig. 27** Grundfos CUE product range

Grundfos CUE is a complete range of frequency converters for pump control in a wide range of applications. Grundfos CUE is designed for wall mounting.

Grundfos CUE provides a variety of benefits to the end-user.

The benefits include

- Grundfos CME pump functionality and user interface
- application- and pump family-related functions
- increased comfort compared to mains-operated pump solutions
- simple installation and commissioning compared to standard frequency converters.

#### Functions

##### Intuitive startup guide

The startup guide enables easy installation and commissioning as well as plug-and-pump convenience. Few settings need to be made by the installer as the rest is done automatically or preset from the factory.

##### Smart user interface

**Fig. 28** Grundfos CUE control panel

Grundfos CUE features a unique user-friendly control panel with graphic display and easy-to-use buttons. Panel layout resembles the well-known Grundfos R100 remote control, which is used with Grundfos CME pumps.

##### Controlling the value you choose

Grundfos CUE has a built-in PI controller offering closed-loop control of a desired value.

The values include

- constant differential pressure
- proportional pressure
- constant temperature
- constant flow.

##### Wide product range

The CUE product range is quite comprehensive, covering five different voltage ranges, enclosure classes IP20/21 (NEMA 1) and IP54/55 (NEMA 12), and a wide range of output powers.

The table below provides a general overview.

Input voltage [V]	Output voltage [V]	Motor [kW]
1 x 200-240	3 x 200-240	1.1 - 7.5
3 x 200-240	3 x 200-240	0.75 - 45
3 x 380-500	3 x 380-500	0.55 - 250
3 x 525-600	3 x 525-600	0.75 - 7.5

## 12. Approvals and markings

### CM, CME pumps

#### Approvals

- RCM mark, New Zealand and Australian EMC.
- EAC certificate.

#### cULus

The cULus approval covers the standard product range within the following supply voltages:

- 1 x 115/230 V, 60 Hz (supply voltage B)
- 3 x 575 V, 60 Hz (supply voltage H, IE2)
- 1 x 115/230 V, 60 Hz (supply voltage B1)
- 3 x 400 V, 50/60 Hz (supply voltage I, IE2)

Contact Grundfos for further information.

#### Pumps

UL778 and C22.2 No 108-01

NEMA 250 (IP code).

#### Overheating protection

UL2111 and C22.2 No 77-95.

**Note:** cULus/cURus-approved motors have no internal protection. Motors fitted with PTC/PTO have no cULus/cURus approval.

#### cURus IE3 motors

The cURus approval covers the IE3 motors mentioned in the following:

IE3 motors for the below listed supply voltages comply with UL1004-1 and CSA22.2 No. 100-04.

- 3 x 208-230/440-480 V, 60 Hz (supply voltage E/E1)
- 3 x 220-240/380-415 V, 50 Hz; 3 x 220-255/380-440 V, 60 Hz (supply voltage O)
- 3 x 380-415 V, 50 Hz; 440-480 V, 60 Hz (supply voltage J).

#### cURus E-motors

The cURus approval covers the CME motors mentioned in the following:

CME motors for the below listed supply voltages comply with UL 60730-1 and CSA E 60730-1.

- 3 x 380-500 V, 50/60 Hz (supply voltage S)
- 3 x 440-480 V, 50/60 Hz (supply voltage T)
- 1 x 200-230 V, 50/60 Hz (supply voltage U).

#### Other approvals and compliance with directives

- EAC (Russia, Belarus, Kazakhstan)
- Compliance with RoHS, directive 2002/96/EC
- CCC
- CEL
- EuP
- KEA
- PSE.

#### Drinking water approvals

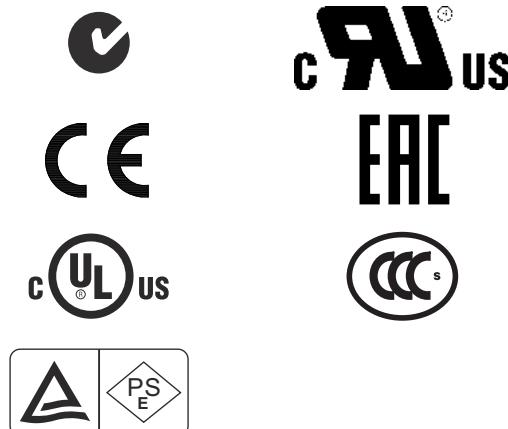

- WRAS
- ACS
- NSF61.

#### Energy approvals

The following energy approvals are available on request:

- Energy Independence and Security Act (EISA) for the USA (CC marking).
- Minimum energy performance standard (MEPS) for Korea, Taiwan, China and Brazil (pending).

#### Markings

#### CM self-priming pumps

The following approvals and markings are available as standard. Further approvals and markings are available on request. Contact Grundfos for further information.

#### Approvals

- TR certificate.

#### Other approvals and compliance with directives

- EAC
- Compliance with RoHS, directive 2002/96/EC
- CCC
- CEL
- EuP.

#### Drinking water approvals

- WRAS
- ACS.

#### Markings

## 13. Certificates

Certificate	Description
Certificate of compliance with the order	According to EN 10204, 2.1. Grundfos document certifying that the pump supplied is in compliance with the order specifications.
Test certificate. Non-specific inspection and testing	According to EN 10204, 2.2. Certificate with inspection and test results of a non-specific pump.
Inspection certificate 3.1	Grundfos document certifying that the pump supplied is in compliance with the order specifications. Inspection and test results are mentioned in the certificate.
Inspection certificate	Grundfos document certifying that the pump supplied is in compliance with the order specifications. Inspection and test results are mentioned in the certificate. Certificate from the surveyor is included. We offer the following inspection certificates: <ul style="list-style-type: none"><li>• Lloyds Register of Shipping (LRS)</li><li>• Det Norske Veritas (DNV)</li><li>• Germanischer Lloyd (GL)</li><li>• Bureau Veritas (BV)</li><li>• American Bureau of Shipping (ABS)</li><li>• Registro Italiano Navale Agenture (RINA)</li><li>• China Classification Society (CCS)</li><li>• Russian maritime register of Shipping (RS)</li><li>• Biro Klassifikasjio Indonesia (BKI)</li><li>• United States Coast Guard (USCG)</li><li>• Nippon Kaiji Koykai (NKK).</li></ul>
Standard test report	Certifies that the main components of the specific pump are manufactured by Grundfos, and that the pump has been QH-tested, inspected and conforms to the full requirements of the appropriate catalogues, drawings and specifications.
Material specification report	Certifies the material used for the main components of the specific pump.
Material specification report with certificate from raw material supplier	Certifies the material used for the main components of the specific pump. A material certificate, EN 10204, 3.1, will be supplied for each main component.
Duty-point verification report	Certifies a test point specified by the customer. Issued according to ISO 9906:2012 concerning "Duty point verification".
Surface-roughness	Shows the measured roughness of the cast pump base of the specific pump. The report indicates the values measured at the base inlet and outlet according to ISO 1302.
Vibration report	Vibration report indicating the values measured during the performance test of the specific pump according to ISO 10816.
Motor test report	Shows the performance test of the specific motor, including power output, current, temperature, stator windings resistance and insulation test.
Cleaned and dried pump	Confirms that the specific pump has been cleaned and dried, and how it was done.
Electro-polished pump	Confirms that the specific pump has been electro-polished. The maximum surface roughness is specified in the report.

Examples of the certificates are shown on pages 34 and 35.

**Note:** Other certificates are available on request.

## 14. Selection and sizing

### Selection of pumps

Selection of pumps should be based on these elements:

- the duty point of the pump (see below)
- dimensional data such as pressure loss as a result of height differences, friction loss in the pipework, pump efficiency, etc. (see below)
- pump materials (see page 37)
- pump connections (see page 37)
- shaft seal (see page 21).

#### Duty point of the pump

From a duty point you can select a pump on the basis of the curve charts starting on page 39.

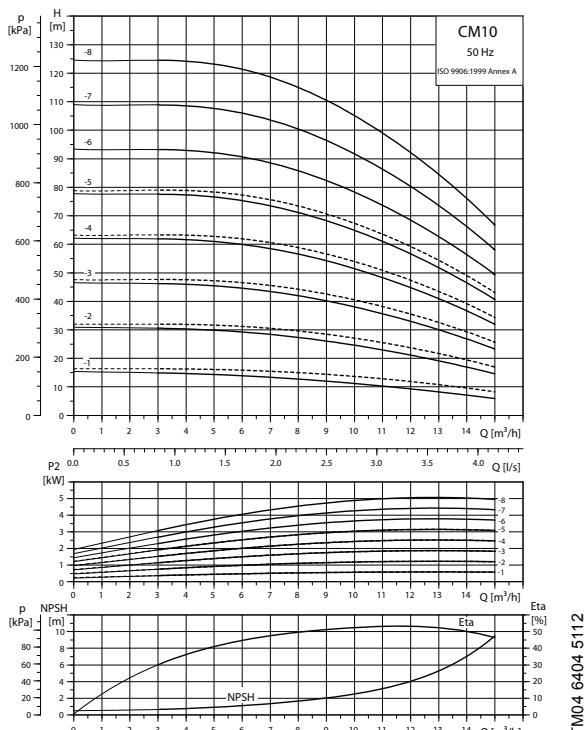

Fig. 29 Example of a curve chart

### Dimensional data

When sizing a pump, take the following factors into account:

- Required flow and pressure at the draw-off point.
- Pressure loss as a result of height differences ( $H_{geo}$ ).

Friction loss in the pipework ( $H_f$ ).

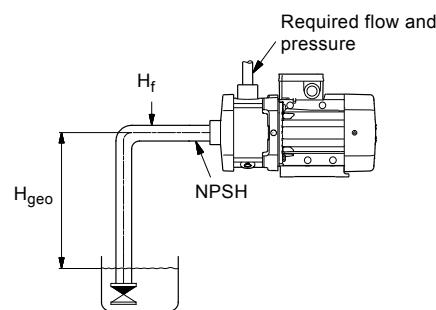

It may be necessary to account for pressure loss in connection with long pipes, bends or valves, etc.

- Best efficiency at the estimated duty point.\*

- NPSH value.

For calculation of the NPSH value, see *Minimum inlet pressure, NPSH* on page 22.

- \* See *Selection of CME pumps* on page 37 for further information about sizing CME pumps.

TM04 34864508

Fig. 30 Dimensional data

### Pump efficiency

When sizing the pump, the efficiency ( $\eta$ ) should be considered so that the pump will operate at or near its maximum efficiency, for instance on the right-hand side in the curve example in fig. 31.

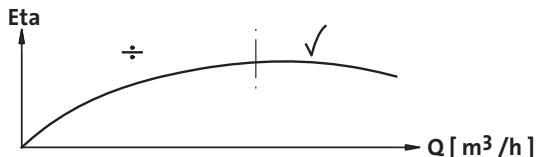

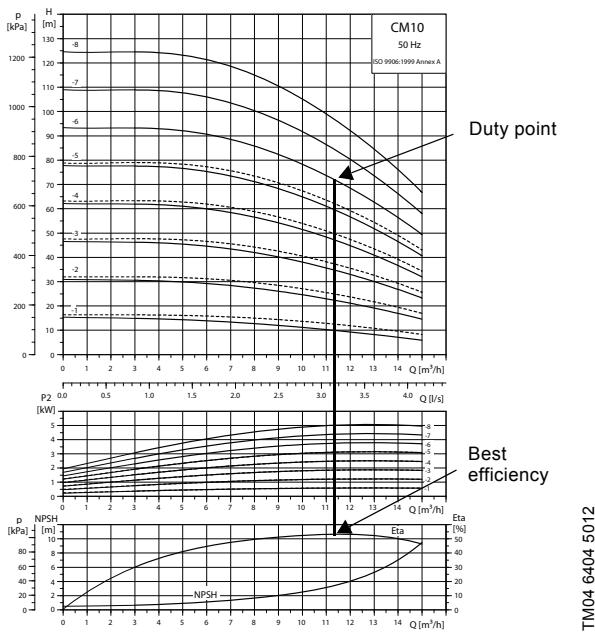

Fig. 31 Best efficiency

Before determining the best efficiency point, the operation pattern of the pump needs to be identified. If the pump is expected to operate at the same duty point, then select a CM pump which is operating at a duty point corresponding with the best efficiency of the pump. The example in fig. 32 shows how to check the pump efficiency when selecting a CM pump.

**Fig. 32** Example of a CM pump's duty point

## Pump materials

Select the material variant on the basis of the liquid to be pumped. The table below gives a general recommendation regarding selection of pump material.

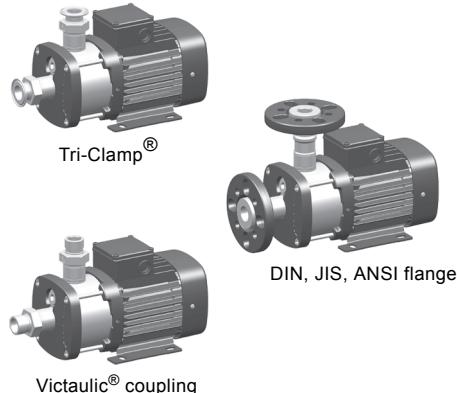

Liquid to be pumped	Material in contact with pump media	Pump type
Clean, non-aggressive liquids such as potable water and oils	Cast iron* (EN-GJL-200)	CM(E)-A
Industrial liquids and acids	Stainless steel (EN 1.4301/AISI 304)	CM(E)-I
	Stainless steel (EN 1.4401/AISI 316)	CM(E)-G

\* The impeller, chamber and filling plugs are made of stainless steel (EN 1.4301/AISI 304).

The pump shaft is made of stainless steel (EN 1.4301/AISI 316).

Contact Grundfos for more specific selection based on the pumped liquid.

## Pump connections

TM04 3837 0409

**Fig. 33** Examples of pump connections

Selection of pump connection depends on the rated pressure and pipework. To meet any requirement, the CM and CME pumps offer a wide range of flexible connections such as:

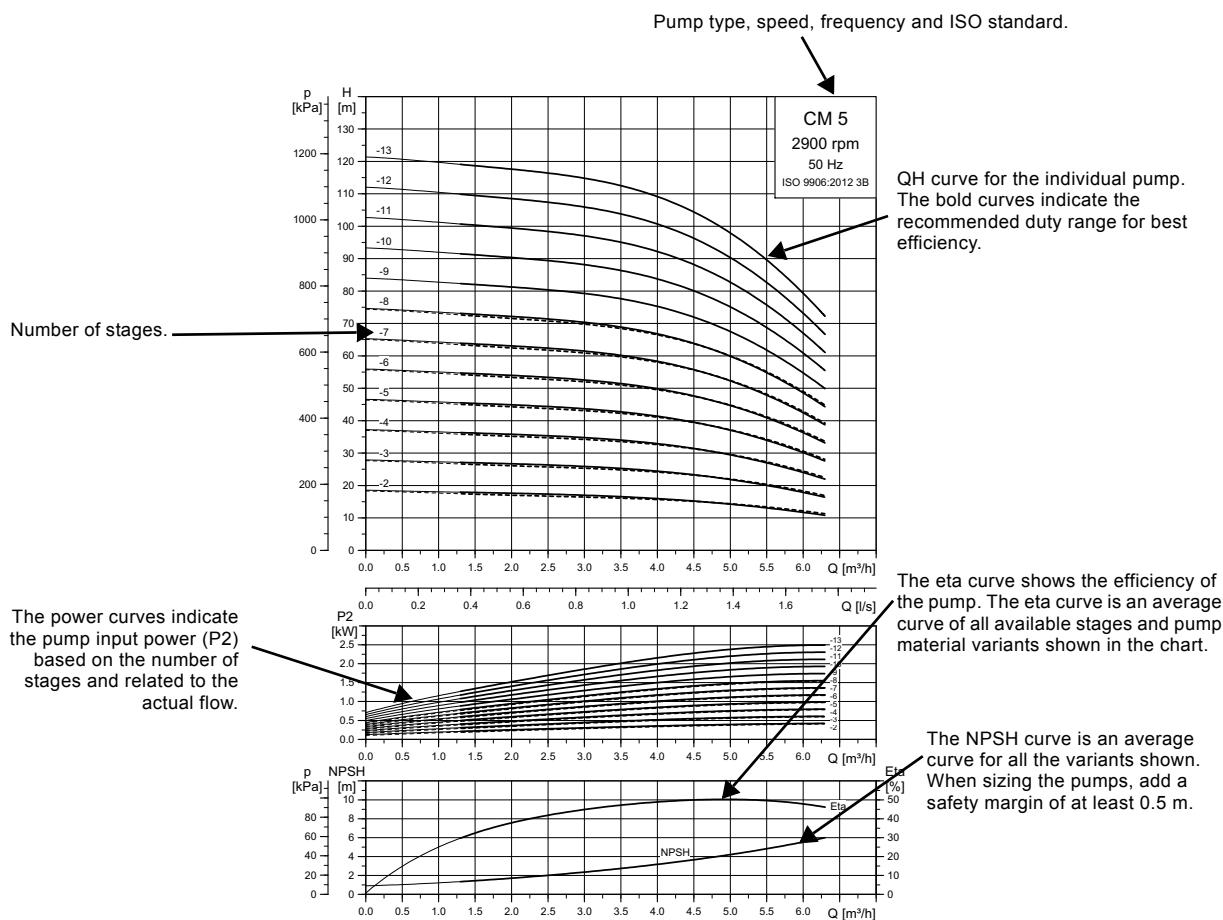

- Tri-Clamp®
- DIN flange
- ANSI flange
- JIS flange
- Victaulic® coupling
- Whitworth thread Rp
- internal NPT thread.

## Selection of CME pumps

CME pumps are normally used in applications characterised by a variable flow. Consequently, you cannot select a pump that is constantly operating at its optimum efficiency. In order to achieve optimum operating economy, the duty point should therefore be close to the optimum efficiency (*eta*) for most operating hours. For further information, see *CME pumps* on page 29.

**Note:** Irrespective of the input frequency, the 100 % speed of CME pumps is approximately 3400 min<sup>-1</sup>. See CME performance curves on pages 64 to 69.

## 15. How to read the curve charts

TM04-3336-4916

TM04-3791-5005

Fig. 34 How to read the curve charts

### Guidelines for performance curves

The guidelines below apply to the curves shown on the following pages:

- Tolerances to ISO 9906:2012 3B.
  - Measurements have been made with airless water at a temperature of 20 °C.
  - The curves apply to the following kinematic viscosity:  $\nu = 1 \text{ mm}^2/\text{s}$  (1 cSt).
  - The QH curves apply to fixed speeds of 2900 min<sup>-1</sup> (50 Hz) and 3480 min<sup>-1</sup> (60 Hz).
- Note:** The actual speed will in most cases deviate from the above-mentioned speeds. So for realistic curves, please refer to the Grundfos Product Center (<http://product-selection.grundfos.com/>) where the pump curves include the characteristics of the selected motor and therefore show curves at actual speeds. In the Grundfos Product Center, you can also adjust the curves depending on the density and viscosity.
- The conversion between head H (m) and pressure p (kPa) applies to a water density of  $\rho = 1000 \text{ kg/m}^3$ .

- Due to the risk of overheating, the pumps are not to be used at a flow below the minimum flow rate. The curve in fig. 35 shows the minimum flow rate as a percentage of the rated flow rate in relation to the liquid temperature.

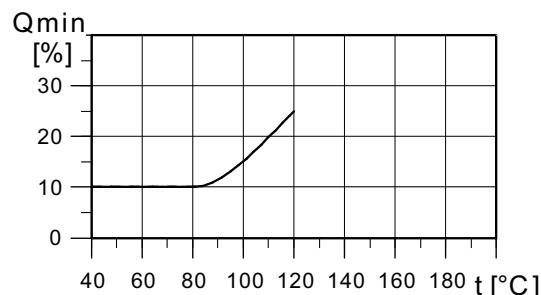

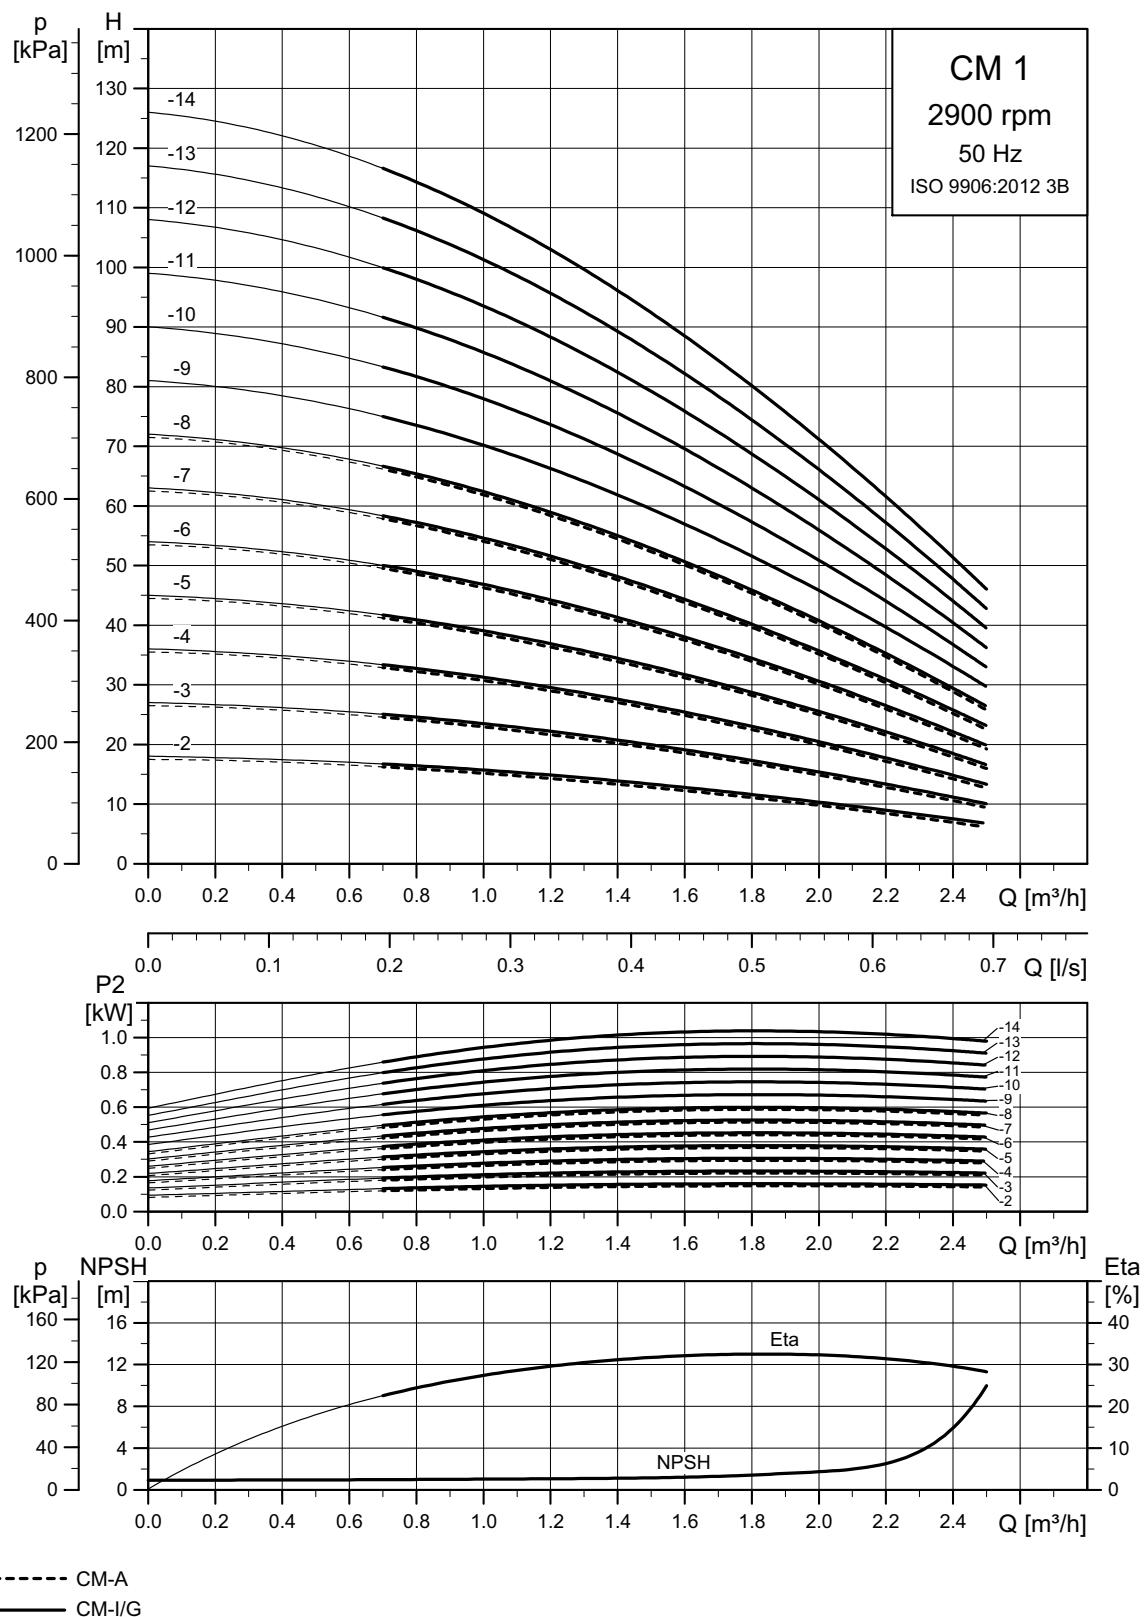

Fig. 35 Minimum flow rate

90	2.20	3.00	1.15	3.70	4.25	0.89
112	3.70	5.00	1.15	6.20 - 5.80	7.00 - 6.60	0.90 - 0.88
112	5.50	7.50	1.15	9.10 - 8.50	10.4 - 9.70	0.91 - 0.89
132	7.50	10.00	1.15	12.4 - 11.5	14.2 - 13.0	0.91 - 0.90

### 1 x 200-240 V, 50/60 Hz (supply voltage U)

Frame size	P <sub>2</sub>		Service factor	I <sub>1/1</sub> [A]	Service factor current [A]	Cos Φ <sub>1/1</sub>
	[kW]	[hp]				
71A	0.55	0.75	1	3.40 - 2.90	3.40 - 2.90	0.98
80B	1.1	1.5	1	6.55 - 5.45	6.55 - 5.45	0.99
90C	1.5	2	1	8.90 - 7.45	8.90 - 7.45	0.99

### 3 x 208-230 V, 50/60 Hz (supply voltage Q)

Frame size	P <sub>2</sub> [kW]	I <sub>1/1</sub> [A]	Cos Φ <sub>1/1</sub>
90CC	1.50	5.60 - 5.10	0.95 - 0.95
90SB	1.50	5.60 - 5.10	0.95 - 0.95
90LC	2.20	8.3 - 7.6	0.95 - 0.90
90FA	2.20	8.3 - 7.6	0.95 - 0.90
112MC	4.0	13.4 - 12.8	0.94 - 0.9
132SC	5.5	19.7 - 18.1	0.94 - 0.92

### 3 x 200-230 V, 50/60 Hz (supply voltage R)

Frame size	P <sub>2</sub> [kW]	I <sub>1/1</sub> [A]	Cos Φ <sub>1/1</sub>
90SB	1.50	5.60 - 5.10	0.95 - 0.95
90LC	2.20	8.3 - 7.6	0.95 - 0.90
112MC	4.0	13.4 - 12.8	0.94 - 0.9
132SC	5.5	19.7 - 18.1	0.94 - 0.92

## Additional data for speed-controlled motors

### Single-phase supply voltage

1 x 200-240 V, 50/60 Hz (supply voltage U)

#### Recommended fuse size

Motor size [kW]	Min. [A]	Max. [A]
0.12 - 0.75	6	10
1.1 - 1.5	10	16

You can use standard as well as quick-blow or slow-blow fuses.

#### Leakage current

Earth leakage current less than 3.5 mA, AC.

Earth leakage current less than 10 mA, DC.

The leakage currents are measured in accordance with EN 61800-5-1:2007.

### Three-phase supply voltage

3 x 380-500 V, 50/60 Hz (supply voltage S)

3 x 440-480 V, 50/60 Hz (supply voltage T)

#### Recommended fuse size

Motor size [kW]	Min. [A]	Max. [A]
0.12 - 1.1	6	6
1.5	6	10
2.2	6	16
3	10	16
4	13	16
5.5	16	32
7.5	20	32
11	32	32

You can use standard as well as quick-blow or slow-blow fuses.

#### Leakage current, AC

Speed [min <sup>-1</sup> ]	Power [kW]	Mains voltage [V]	Leakage current [mA]
2900-4000	0.25 - 2.2	≤ 400	< 3.5
		> 400	< 5
	3 - 5.5	≤ 400	< 3.5
		> 400	< 3.5
4000-5900	7.5 - 11	≤ 400	< 3.5
		> 400	< 5
	0.25 - 2.2	≤ 400	< 3.5
		> 400	< 5
	3 - 5.5	≤ 400	< 3.5
		> 400	< 3.5
	7.5 - 11	≤ 400	< 3.5
		> 400	< 5

The leakage currents are measured in accordance with EN 61800-5-1:2007.

## Inputs and outputs

### Earth reference, GND

All voltages refer to GND.

All currents return to GND.

### Absolute maximum voltage and current limits

Exceeding the following electrical limits may result in severely reduced operating reliability and motor life:

Relay 1:

Maximum contact load: 250 VAC, 2 A or 30 VDC, 2 A.

Relay 2:

Maximum contact load: 30 VDC, 2 A.

GENI terminals: -5.5 to 9.0 VDC or less than 25 mADC.

Other input or output terminals: -0.5 to 26 VDC or less than 15 mADC.

### Digital inputs, DI

Internal pull-up current greater than 10 mA at  $V_i$  equal to 0 VDC.

Internal pull-up to 5 VDC (currentless for  $V_i$  greater than 5 VDC).

Low logic level:  $V_i$  less than 1.5 VDC.

High logic level:  $V_i$  greater than 3.0 VDC.

Hysteresis: No.

Screened cable: 0.5 - 1.5 mm<sup>2</sup>, 28-16 AWG.

Maximum cable length: 500 m.

### Open-collector digital outputs, OC

Current sinking capability: 75 mADC, no current sourcing.

Load types: Resistive or/and inductive.

Low-state output voltage at 75 mADC: Maximum 1.2 VDC.

Low-state output voltage at 10 mADC: Maximum 0.6 VDC.

Overcurrent protection: Yes.

Screened cable: 0.5 - 1.5 mm<sup>2</sup>, 28-16 AWG.

Maximum cable length: 500 m.

**Analog inputs, AI**

Voltage signal ranges:

- 0.5 - 3.5 VDC, AL AU.
- 0-5 VDC, AU.
- 0-10 VDC, AU.

Voltage signal:  $R_i$  greater than 100 k $\Omega$  at 25 °C.

Leak currents may occur at high operating temperatures. Keep the source impedance low.

Current signal ranges:

- 0-20 mAADC, AU.
- 4-20 mAADC, AL AU.

Current signal:  $R_i$  equal to 292  $\Omega$ .

Current overload protection: Yes. Change to voltage signal.

Measurement tolerance: - 0/+ 3 % of full scale (maximum-point coverage).

Screened cable: 0.5 - 1.5 mm<sup>2</sup>, 28-16 AWG.

Maximum cable length: 500 m (excl. potentiometer).

Potentiometer connected to +5 V, GND, any AI:

Use maximum 10 k $\Omega$ .

Maximum cable length: 100 m.

**Analog output, AO**

Current sourcing capability only.

Voltage signal:

- Range: 0-10 VDC.
- Minimum load between AO and GND: 1 k $\Omega$ .
- Short-circuit protection: Yes.

Current signal:

- Ranges: 0-20 and 4-20 mAADC.
- Maximum load between AO and GND: 500  $\Omega$ .
- Open-circuit protection: Yes.

Tolerance: - 0/+ 4 % of full scale (maximum-point coverage).

Screened cable: 0.5 - 1.5 mm<sup>2</sup>, 28-16 AWG.

Maximum cable length: 500 m.

**Pt100/1000 inputs, PT**

Temperature range:

- Minimum -30 °C. 88  $\Omega$  / 882  $\Omega$ .
- Maximum 180 °C. 168  $\Omega$  / 1685  $\Omega$ .

Measurement tolerance: ± 1.5 °C.

Measurement resolution: &lt; 0.3 °C.

Automatic range detection, Pt100 or Pt1000: Yes.

Sensor fault alarm: Yes.

Screened cable: 0.5 - 1.5 mm<sup>2</sup>, 28-16 AWG.

Use Pt100 for short wires.

Use Pt1000 for long wires.

**LiqTec sensor inputs\***

Use Grundfos LiqTec sensor only.

Screened cable: 0.5 - 1.5 mm<sup>2</sup>, 28-16 AWG.**Grundfos Digital Sensor input and output, GDS\***

Use Grundfos Digital Sensor only.

\* Only applicable for TPE, TPED Series 2000 and TPE3, TPE3 D pumps.

**Power supplies****+5 V:**

- Output voltage: 5 VDC - 5 %/+ 5 %.
- Maximum current: 50 mAADC, sourcing only.
- Overload protection: Yes.

**+24 V:**

- Output voltage: 24 VDC - 5 %/+ 5 %.
- Maximum current: 60 mAADC, sourcing only.
- Overload protection: Yes.

**Digital outputs, relays**

Potential-free changeover contacts.

Minimum contact load when in use: 5 VDC, 10 mA.

Screened cable: 0.5 - 2.5 mm<sup>2</sup>, 28-12 AWG.

Maximum cable length: 500 m.

**Bus input**

Grundfos GENibus protocol, RS-485.

Screened 3-core cable: 0.5 - 1.5 mm<sup>2</sup>, 28-16 AWG.

Maximum cable length: 500 m.

**EMC (electromagnetic compatibility)**

Standard used: EN 61800-3.

The table below indicates the emission category of the motor.

C1: Fulfils the requirements for residential areas.

C3: Fulfils the requirements for industrial areas.

Motor [kW]	Emission category	
	1450-2000 min <sup>-1</sup>	2900-4000 min <sup>-1</sup> 4000-5900 min <sup>-1</sup>
0.25	C1	C1
0.37	C1	C1
0.55	C1	C1
0.75	C1	C1
1.1	C1	C1
1.5	C1	C1
2.2	C1	C1
3	C1	C1
4	C1	C1
5.5	C3/C1*	C1
7.5	C3/C1*	C3/C1*
11	-	C3/C1*

\* C1, if equipped with an external Grundfos EMC filter.

Immunity: Fulfils the requirements for industrial areas.

Contact Grundfos for further information.

**Enclosure class**

Standard: IP55 (IEC 34-5).

Optional: IP66 (IEC 34-5).

**Insulation class**

F (IEC 85).

**Standby power consumption**

5-10 W.

**Cable entries**

Motor [kW]	Number and size of cable entries	
	2900-4000 min <sup>-1</sup>	4000-5900 min <sup>-1</sup>
0.25 - 1.5	4 x M20	4 x M20
2.2	4 x M20	4 x M20
3-4	1 x M25 + 4 x M20	1 x M25 + 4 x M20
5.5	1 x M25 + 4 x M20	1 x M25 + 4 x M20
7.5 - 11	1 x M32 + 5 x M20	1 x M32 + 5 x M20

**Cable glands delivered with the pump**

Motor [kW]	Quantity	Thread size	Cable diameter [mm]
0.25 - 2.2	2	M20 x 1.5	5
	1		7-14
3 - 5.5	4	M20 x 1.5	5
	1	M25 x 1.5	9-18
7.5 - 11	4	M20 x 1.5	5
	1	M32 x 1.5	14-25

**Torques**

Terminal	Thread size	Maximum torque [Nm]
L1, L2, L3, L, N	M4	1.8
NC, C1, C2, NO	M2.5	0.5
1-26 and A, Y, B	M2	0.5

**Sound pressure level**

Motor [kW]	Maximum speed stated on nameplate [min <sup>-1</sup> ]	Sound pressure level ISO 3743 [dB(A)]		
		Speed [min <sup>-1</sup> ]	1-phase motors	3-phase motors
0.25 - 0.75	2000	1500	38	38

The grey fields indicate that the motor is not available in this MGE motor range.

## 27. Customisation

Although the Grundfos CM and CME product range offers a number of pumps for different applications, customers require specific pump solutions to satisfy their needs. Below are the options available for customising the CM and CME pumps.

Contact Grundfos for further information or for requests other than the ones mentioned below.

### Motors

#### Motor with multiplug connection

Mains-operated motors fitted with a Harting® 10-pin multiplug connection, HAN 10 ES, enable easy connection to the mains.

**Note:** For CME pumps we offer the solutions shown on page 125.

The purpose of a multiplug connection is to facilitate the electrical installation and service of the pump. The multiplug functions as a plug-and-pump device.

Figure 36 shows the position of the multiplug on the mains-operated motor.

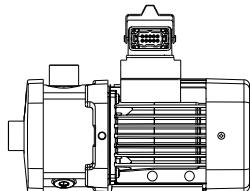

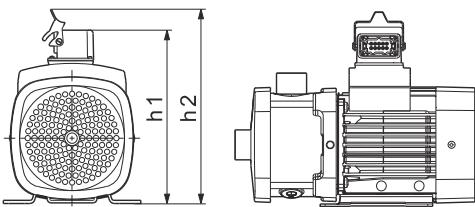

Fig. 36 Motor with multiplug connection

Fig. 37 Multiplug logo

TM02 0470 0700

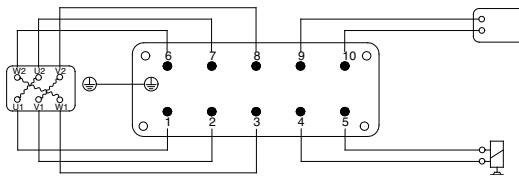

#### Dimensions

TM04 5847 4609

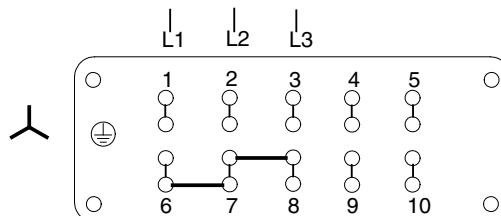

Pump type	Frame size	h1	h2
CM 1	71	206	237
CM 3	80	206	237
CM 5	90	263	294
	100	283	314
CM 10	71	231	262
CM 15	80	231	262
CM 25	90	273	304
	100	283	314
	112	309	340
	132	309	340

#### Plug connections

Fig. 38 Plug connection from motor

TM01 8703 0700

Fig. 39 Plug connection for star connection

TM01 8704 0700

Fig. 40 Plug connection for delta connection

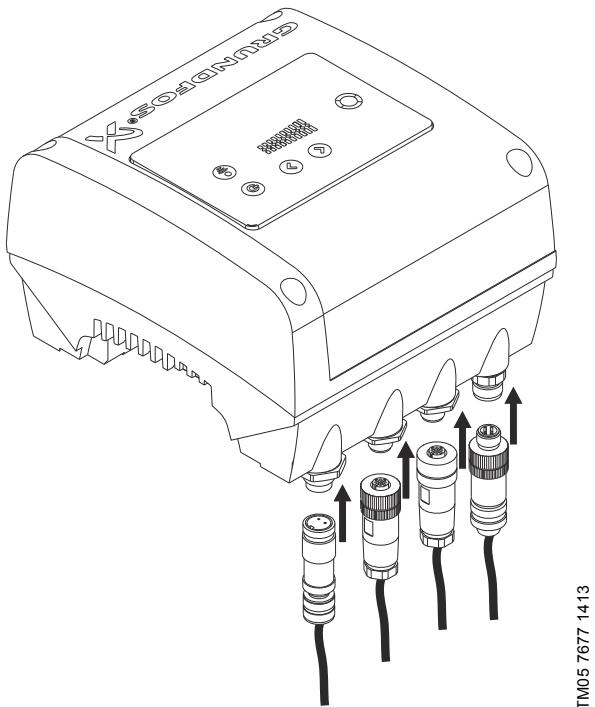

**Note:** Wire bridges for connections are located in the plug.

## Plug-and-pump solution for CME pumps

To facilitate electrical installation and service, we offer plug-and-pump solutions for CME pumps. These customised solutions are only available on request. Please contact Grundfos.

CME pumps can be fitted with receptacles in the cable entries of the motor for fast cable connection. Simply plug and pump.

Figure 41 shows how the CME pumps are connected.

**Fig. 41** Fast connection of CME pumps

## Motor with anti-condensation heater

CM

**Fig. 42** Mains-operated motor with anti-condensation heater

TM03 2440 4305

In applications where condensation in the motor may occur, we recommend that you install a motor with an anti-condensation heater on the stator coil ends. The heater keeps the motor temperature higher than the ambient temperature and prevents condensation.

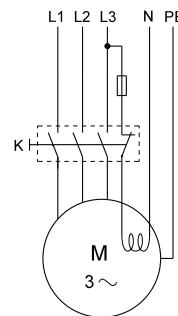

In areas with ambient temperatures below 0 °C, we recommend that you always use motors with anti-condensation heater.

High humidity may cause condensation in the motor. Slow condensation occurs as a result of a decreasing ambient temperature; rapid condensation occurs as a result of shock cooling caused by direct sunlight followed by rain.

**Note:** Rapid condensation is not to be confused with the phenomenon which occurs when the pressure inside the motor is lower than the atmospheric pressure. In such cases, moisture is sucked from the atmosphere into the motor through bearings, housings, etc.

In applications with constant humidity levels above 85 %, the drain holes in the drive-end flange must be open. This changes the enclosure class to IPX5. If IP55 protection is required due to operation in dusty environments, we recommend that you install a motor with anti-condensation heater.

Figure 43 shows a typical circuit of a three-phase motor with anti-condensation heater.

**Fig. 43** Three-phase motor with anti-condensation heater

TM03 4058 1406

### Legend

Symbol	Designation
K	Contactor
M	Motor

**Note:** Connect the anti-condensation heater to the power supply so that it is on when the motor is switched off.

The following motor sizes are available with anti-condensation heater:

Motors, 50/60 Hz	Power of heating unit [W]	
Frame size	1 x 24 V	1 x 190-250 V
71/80		23
90	38	31
100		38
112/132	2 x 38	2 x 38

### CME

The MGE motors fitted to CME pumps incorporate a standstill heating function. No external heater on the stator coil is necessary.

The working principle is that AC voltage is applied to the motor windings. The applied AC voltage will not make the motor run, but will ensure that sufficient heat is generated to prevent condensation in the motor. The terminal box is kept warm and dry by the heat generated via the mains voltage connected. However, it is a condition that the terminal box is not exposed to open air. It must be provided with a suitable cover to protect it from rain and the drain plugs have to be removed to obtain ventilation in motor and terminal box. See *Operation in condensing environments*, on page 21.

## Motors with PTC sensors

**Fig. 44** PTC sensor incorporated in windings

Built-in PTC sensors (thermistors) protect the motor against overheating. Single-phase motors are protected against slow and rapid overheating. Three-phase motors are protected against slow overheating.

We offer built-in PTC sensors to protect the motor. Three-phase mains-operated motors with supply voltages F, G and O of 3 kW and up have PTC sensors as standard (UL-approved motors have no internal protection).

**Note:** PTC sensors must be connected to an external tripping unit connected to the control circuit.

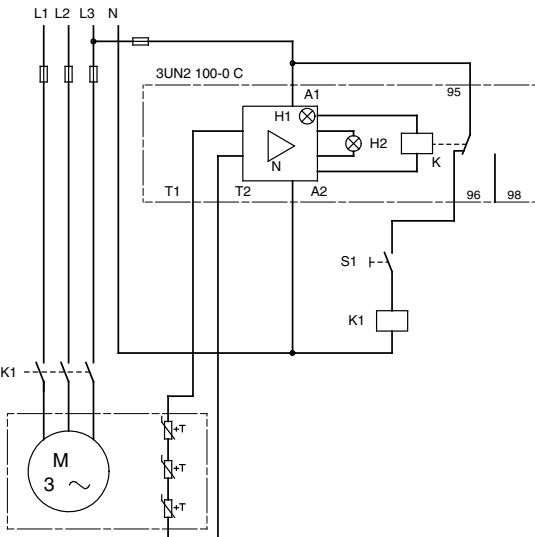

Protection according to IEC 60034-11:

- slow and rapid overheating.

PTC sensors comply with DIN 44082. Maximum voltage at the terminals,  $U_{max} = 2.5$  VDC. All tripping units available for DIN 44082 PTC sensors meet this requirement.

TM02 7038 2403

Figure 45 shows a typical circuit of a three-phase motor with PTC sensors.

**Fig. 45** Three-phase motor with PTC sensors

### Legend

Symbol	Designation
S1	On/off switch
K1	Contactor
+T	PTC sensor (thermistor) in motor
M	Motor
3UN2 100-0 C	Tripping unit with automatic resetting
N	Amplifier
K	Output relay
H1	LED "Ready"
H2	LED "Tripped"
A1, A2	Connection for control voltage
T1, T2	Connection for PTC sensor loop

## Motors with thermal switches (PTO)

**Fig. 46** Thermal switch incorporated in windings

Built-in thermal switches protect the motor against overheating. Single-phase motors are protected against slow and rapid overheating. Three-phase motors are protected against slow overheating. We offer mains-operated motors with bimetallic thermal switches in the motor windings.

Three-phase mains-operated motors with supply voltages F, G and O are available with built-in thermal switches.

**Note:** Thermal switches must be connected to an external control circuit to protect the motor against slow overheating. The thermal switches require no tripping unit.

Protection according to IEC 60034-11:

- slow and rapid overheating.

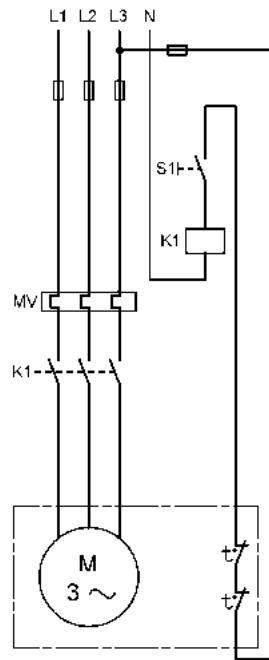

As protection against seizure, the motor must be connected to a motor-protective circuit breaker.

Thermal switches tolerate the following maximum loads:

$U_{\max}$	250 VAC
$I_N$	1.5 A
$I_{\max}$	5.0 A (locked-rotor and breaking current)

Figure 47 shows a typical circuit of a three-phase motor with built-in bimetallic thermal switches.

TM02 7042 2403

TM00 3964 1494

### Legend

Symbol	Designation
S1	On/off switch
K1	Contactor
$t^{\circ}$	Thermal switch in motor
M	Motor
MV	Motor-protective circuit breaker

## Undersize and oversize motors

The available motor sizes are shown in section *Motor data* on pages 116 to 120.

Undersize and oversize motors are defined as the next kW size below or above the fitted standard motor.

**Note:** The CM 1, 3 and 5 cannot be combined with frame sizes 112 and 132.

We recommend that you use an oversize motor if the operating conditions fall outside the standard conditions.

We especially recommend oversize motors in these cases:

- The pump is installed at an altitude of more than 1000 metres above sea level.
- The viscosity or density of the pumped liquid is higher than that of water.
- The ambient temperature exceeds 55 °C (CM).

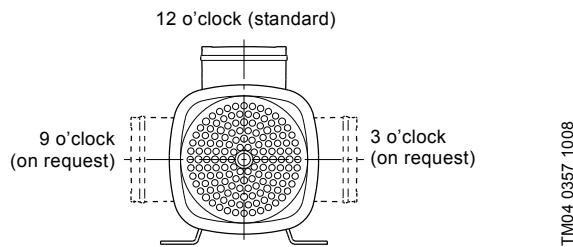

We recommend that you use an undersize motor if the operating conditions do not at all reach the standard conditions.

We especially recommend undersize motors in these cases:

- The viscosity or density of the pumped liquid is lower than that of water.
- The duty point of the pump is constant, and the flow rate is significantly lower than the recommended maximum flow rate.

## Terminal box positions

As standard the terminal box is mounted in 12 o'clock position as shown in fig. 48. CM pumps with motor frame sizes of 71 and 80 are available with other terminal box positions on special request.

**Fig. 48** Terminal box positions of frame sizes 71 and 80, as seen from fan cover side

## Functional modules for CME pumps

CME pumps offer a number of advantages, depending on hardware combinations and software configuration of the motor. For example, various functional modules are available.

As standard, the CME pumps are fitted with the standard functional module. The basic or advanced module is available as a customised solution.

### Basic functional module (FM 100)

The basic module has only the most necessary inputs for closed- and open-loop operation. The module also enables communication via a GENIbus connection.

The basic module has these connections:

- analog voltage input
- two digital inputs or one digital input and one open-collector output
- GENIbus connection.

### Standard functional module (FM 200)

The standard module has more inputs and outputs than the basic module and is suitable for even more demanding applications.

The standard module has these connections:

- two analog inputs
- two digital inputs or one digital input and one open-collector output
- Grundfos Digital Sensor input and output
- two signal relay outputs
- GENIbus connection.

### Advanced functional module (FM 300)

The advanced module has a number of inputs and outputs enabling the motor to be used in advanced applications where many inputs and outputs are required.

The advanced module has these connections:

- three analog inputs
- one analog output
- two dedicated digital inputs
- two configurable digital inputs or open-collector outputs
- Grundfos Digital Sensor input and output
- two Pt100/1000 inputs
- LiqTec sensor inputs
- two signal relay outputs
- GENIbus connection.

## Pumps

### Pumping of liquids down to -30 °C

We offer custom-built pumps for the pumping of liquids down to -30 °C. The pumps have an oversize neck ring ensuring that impellers do not seize up as a result of thermal expansion.

We offer the above solution for CM and CME in I and G versions (stainless steel).

### Surface treatment

#### Cleaned and dried pumps

We recommend cleaned and dried pumps for use in applications involving strict demands on cleanliness and surface quality, such as low content of silicone. Prior to assembly, all pump parts are cleaned in 60 to 70 °C water with a cleaning agent. All pump parts are then thoroughly rinsed in de-ionised water and dried. The pump is assembled without any use of silicone lubricants.

Cleaned and dried pumps are not performance-tested.

#### Electropolished stainless-steel pumps

Electropolished pumps are often used in the pharmaceutical industry and in the food and beverage industry where materials and surface quality must meet strict requirements to hygiene or corrosion resistance.

Electropolishing removes burrs as well as metallic and non-metallic inclusions, providing a smooth, clean and corrosion-resistant stainless-steel surface.

First, all components are pickled in a mixture of nitric and hydrofluoric acid. Subsequently, the components are electropolished in a mixture of sulphuric and phosphoric acid. Finally, the components are passivated in nitric acid.

To meet the strict hygienic requirements to material and surface quality, we offer electropolished stainless-steel pumps with the following surface quality:

Surface quality: Ra ≤ 0.8 µm.

#### Alternative colouring

We offer custom-built pumps in any NCS- or RAL-specified colour to suit your requirements!

The used paint is water-based. Painted parts correspond to corrosion class III.

All pump types and sizes are available with alternative colouring.

#### Customised nameplate

We offer additional customised nameplates attached to the pump:

- A nameplate supplied by you.
- A Grundfos nameplate customised in terms of a specific duty point.
- A Grundfos nameplate with a tag number.

**Note:** The Grundfos standard nameplate is always fitted to the pump.

### Shaft seal arrangements

The shaft seal is developed with customisation in mind. Depending on media, you may combine the seal faces in any way.

Available stationary seal faces: Q, B, U.

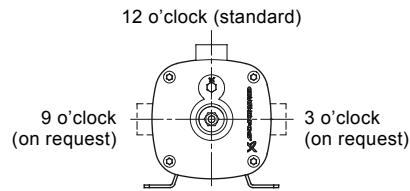

Available rotating seal faces: Q, V, U.

Rubber: E, V and K.

**Note:** For further details about seal face material codes, see *Identification* on page *Identification*.

### Alternative connection positions

The pump is available with various connection positions on special request. See fig. 49.

TM03 8709 1008

Fig. 49 Alternative connection positions as seen from pump inlet side

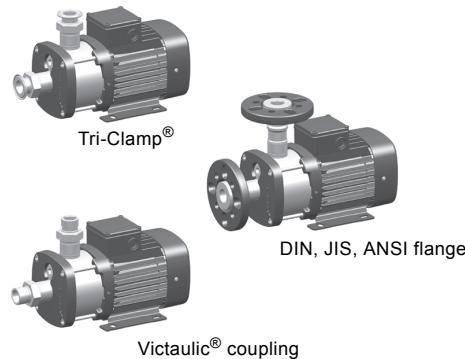

**Note:** On CM 1, 3 and 5 pumps fitted with motor frame sizes 71 and 80, the outlet can be positioned upon customer request without any issues. All other pump types cannot be factory tested if they are ordered with outlet positions that are not standard.

### Alternative pipe connections

A wide range of pipe connections are available for the CM and CME pumps:

- Tri-Clamp®
- DIN, JIS, ANSI flange (combi flange)
- Victaulic® coupling
- Whitworth thread Rp
- internal NPT thread.

The available pipe connections are shown in fig. 50.

TM04 3937 0409

Fig. 50 Examples of pipe connections

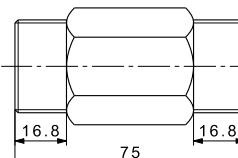

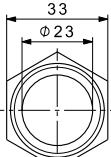

## 28. Accessories

### Pipework connections

Various sets of flanges and couplings are available for pipework connection.

#### Distance piece

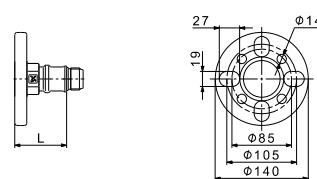

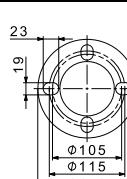

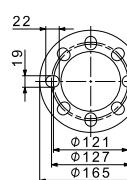

The distance piece is intended for mounting on the outlet port in order to improve the accessibility when connecting the pump to the piping system. The distance piece is made of brass.

Distance piece	Pump type	Pipework connection	Pump thread	Product number
	 TM04 5800 4009	CM 1 CM 3 CM 5	1"	R 96587201

#### Flange sets for CM(E) (DIN/ANSI/JIS)

All materials in contact with the pumped liquids are made of stainless steel EN 1.4408/AISI 316.

The pipe stub is made of stainless steel EN 1.4408/AISI 316 and the flange part is made of cast iron EN-GJL-200.

Flange	Pump type	Pipework connection	Pump thread	$L^*$ [mm]		Product number
				Flange mounted on pump inlet	Flange mounted on pump outlet	
	CM 1 CM 3 CM 5	DN 32	Rp			96904693
			NPT			96904705
			Rp	49.0	78.0	96904696
			NPT			96904708
	CM 10	DN 40	Rp			96904699

	Stainless steel	•	•		•	•

\*) Only 9 mm clearance between flange and terminal box.

**Counter-flanges for CM(E)-A**

Counter-flanges for CM(E)-A pumps are made of cast iron EN-GJL-200.

A counter-flange set consists of one counter-flange, one gasket, bolts and nuts.

Counter-flange	Pump type	Description	Rated pressure	Pipework connection	Product number
 TM03 0400 3705	CM(E) 1-A CM(E) 3-A CM(E) 5-A	Threaded	16 bar, EN 1092-2	Rp 1 1/4	00419901

\* Length from outer edge of connection to pump inlet or outlet port.

### Coupling, pipe stub and gasket for Victaulic® connections

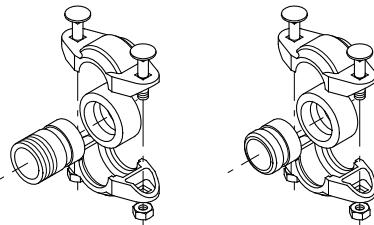

Parts in contact with the pumped liquid are made of stainless steel EN 1.4401/AISI 316, and rubber.

A Victaulic® coupling set consists of two coupling halves (Victaulic, type 77), one gasket, one pipe stub (for welding or threaded), bolts and nuts.

Coupling and pipe stub	Pump type	Pipe stub	Pipework connection	Rubber parts	Number of coupling sets required	Product number
CM(E) 1 CM(E) 3 CM(E) 5*	Threaded	R 1		EPDM	2	97575245

			PTFE		2	96515377

## Potentiometer for CME

The potentiometer is for setpoint setting and start/stop of the CME pump.

Product	Product number
External potentiometer with cabinet for wall mounting	625468

## Communication interface modules (CIM) for CME

TM05 7508 1113

**Fig. 51** Grundfos CIM modules

A CIM module is an add-on communication interface module for MGE motors. The CIM module enables data transmission between the pump and an external system, for example a BMS (building management system) or SCADA system.

We offer the following CIM modules:

Description	Fieldbus protocol	Product number
CIM 050	GENibus	96824631
CIM 100	LonWorks	96824797
CIM 150	PROFIBUS DP	96824793
CIM 200	Modbus RTU	96824796
CIM 250*	GSM/GPRS	96824795
CIM 270*	GRM	96898815
CIM 300	BACnet MS/TP	96893770
CIM 500	BACnet IP	
CIM 500	Modbus TCP	98301408
CIM 500	PROFINET	

\* Antenna not included. See below.

### Antennas for CIM 250 and 270

Description	Product number
Antenna for roof	97631956
Antenna for desk	97631957

## Grundfos GO

Grundfos GO is used for wireless infrared or radio communication with the pumps.

Various Grundfos GO variants are available. The variants are described in the following.

### MI 204

The MI 204 is an add-on module with built-in infrared and radio communication. The MI 204 can be used in conjunction with an Apple iPhone or iPod with Lightning connector, e.g. fifth generation iPhone or iPod.

(The MI 204 is also available together with an Apple iPod touch and a cover.)

MI 204

TM05 7704 1513

**Fig. 52** MI 204

Supplied with the product:

- Grundfos 204
- sleeve
- quick guide
- charger cable.

### MI 301

The MI 301 is a module with built-in infrared and radio communication. The MI 301 must be used in conjunction with an Android or iOS-based smart devices with a Bluetooth connection. The MI 301 has rechargeable Li-ion battery and must be charged separately.

TM05 3890 1712

**Fig. 53** MI 301

Supplied with the product:

- Grundfos MI 301
- battery charger
- quick guide.

### Product numbers

Grundfos GO Remote variant	Product number
Grundfos MI 204	98424092
Grundfos MI 204 including iPod touch	98612711
Grundfos MI 301	98046408

## Sensors for CME

The sensors must be fitted to the pipework with suitable fittings.

Accessory	Type	Supplier	Measuring range	Product number
Flowmeter	SITRANS FM MAGFLO MAG 5100 W	Siemens	1-5 m <sup>3</sup> (DN 25)	ID8285

**Note:** All sensors have 4-20 mA signal output.

### Danfoss pressure sensor kits for CME pumps and CM pumps connected to Grundfos CUE

The kit comprises:	Pressure range [bar]	Temperature range	Product number
• Danfoss pressure transmitter, type MBS 3000, with 2 m screened cable	0-4		96428014
• Connection: G 1/2 A (DIN 16288 - B6kt)	0-6		96428015
• 5 cable clips (black)	0-10	-40-85 °C	96428016
• Installation and operating instructions PT (400212)	0-16		96428017
	0-25		96428018

### DPI differential-pressure sensor kit

The kit comprises:	Pressure range [bar]	Product number
• 1 sensor incl. 0.9 m screened cable (7/16" connections)	0 - 0.6	96611522
• 1 original DPI bracket (for wall mounting)	0 - 1.0	96611523
• 1 Grundfos bracket (for mounting on motor)	0 - 1.6	96611524
• 2 M4 screws for mounting of sensor on bracket	0 - 2.5	96611525
• 1 M6 screw (self-cutting) for mounting on MGE 90/100	0 - 4.0	96611526
• 1 M8 screw (self-cutting) for mounting on MGE 112/132	0 - 6.0	96611527
• 3 capillary tubes (short/long)	0-10	96611550
• 2 fittings (1/4" - 7/16")		
• 5 cable clips (black)		
• Installation and operating instructions (480675)		
• Service kit instructions		

## MP 204 motor protector

TM03 1471 2205

**Fig. 54** MP 204

The MP 204 is an electronic motor protector and data collecting unit. Apart from protecting the motor, it can also send information to a control unit via GENibus, like for instance:

- trip
- warning
- energy consumption
- input power
- motor temperature.

The MP 204 protects the motor primarily by measuring the motor current by means of a true RMS measurement.

The pump is protected secondarily by measuring the temperature with a Tempcon sensor, a Pt100/Pt1000 sensor and a PTC sensor/thermal switch.

The MP 204 is designed for single- and three-phase motors.

**Note:** The MP 204 must not be used together with frequency converters.

### Features

- Phase-sequence monitoring
- indication of current or temperature
- input for PTC sensor/thermal switch
- indication of temperature in °C or °F
- 4-digit, 7-segment display
- setting and status reading with the Grundfos GO Remote
- setting and status reading via the Grundfos GENibus fieldbus.

### Tripping conditions

- Overload
- underload (dry running)
- temperature
- missing phase
- phase sequence
- overvoltage
- undervoltage
- power factor ( $\cos \varphi$ )
- current unbalance.

### Warnings

- Overload
- underload
- temperature
- overvoltage
- undervoltage
- power factor ( $\cos \varphi$ )
- run capacitor (single-phase operation)
- starting capacitor (single-phase operation)
- loss of communication in network
- harmonic distortion.

### Learning function

- Phase sequence (three-phase operation)
- run capacitor (single-phase operation)
- starting capacitor (single-phase operation)
- identification and measurement of Pt100/Pt1000 sensor circuit.

### Product number

Description	Product number
MP 204 motor protector	96079927

## Cover for CM motor

The cover protects the motor from ingress of liquid, especially if the pump is installed in a vertically tilted position with the motor end pointing upwards.

### Product number

Description	Product number
Cover for CM motors, frame sizes 71 and 80	97528743

## Angled cable gland

**Fig. 55** Angled cable gland with O-ring and lock nut

Description	Product number
Angled cable gland with O-ring and lock nut	97842998

## 29. Grundfos Product Center

*Online search and sizing tool to help you make the right choice.*

<http://product-selection.grundfos.com>

"SIZING" enables you to size a pump based on entered data and selection choices.

"REPLACEMENT" enables you to find a replacement product. Search results will include information on

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.
